Please fill out the ESCI survey.

Exam

Exam

The exam covers the entire course from week 1 to 9 (excluding week 10), including homework and quizzes. No new materials will be tested, but functions or routines introduced in lectures, quizzes, and homework are all included.

The exam will

1. Use the Gauchospace quiz engine, just like the mid-term exam. The format would be the same.

2. Use the Jupyterlab to download coding problems, solve them, and submit them using `git`. The format would be the same as homework. There will be a few basic debugging problems and 2 or 3 homework-like problems. I recommend reviewing all homework to prepare this coding exam.

As the midterm, the final exam is openbook. You can even search internet. However, any form of bi-directional communication regarding the exam is considered to be cheat.

More details will follow early next week.
